

Elliot Farms—Tobacco Field in

Frost damage occurs when the water inside the plant freezes and forms ice crystals, puncturing the plant cell walls. Since SumaGreen Ag treated plants are more nutrient dense, they contain less water and are less likely to be damaged by freezing temperatures.

Look at this Winter Wheat grown ONLY with SumaGreen Ag in Canada. This wheat has ZERO fertilizer on the field. If it does this well in a freeze imagine what it could do for you in better conditions.

Increase Yields— Decrease Production Costs
